TURBO POP POPCORN MACHINE

Easy to use. Hard to resist!

OPERATING INSTRUCTIONS

1 POWER UP!

Plug your Caterkid popcorn machine into a single-phase 16-AMP plug socket. Do not use a multiplug. If an extension is used, ensure it is rated 16 AMP.

2 HEAT THINGS UP:

Flip on the Light and Kettle Heat switches.

3 PRE-HEAT PERFECTION:

Allow the kettle approximately 5 minutes to heat up.

4 OIL'S WELL THAT ENDS WELL:

Lift the kettle lid until it's attached to the lid magnet. Using the provided squeeze bottle, add about 10ml of oil (that's 3 good squirts!) directly into the kettle. Remember, keep the kettle lid closed during the popping operation.

5 CORN TIME!

Pour 200 grams (about 1 cup) of raw corn into the kettle and close the lid.

6 LET THE POPPING BEGIN!

Switch on the Kettle Stirrer switch – you'll see it start to operate. In just a few minutes, your corn will begin to pop and overflow into the base.

7 THE GRAND FINALE:

As soon as the popping stops, switch off the stirrer. Then, gently tip the kettle to release any remaining popped corn.

8 MORE POPCORN?

If you're craving more, simply repeat the process starting from step 4!

9 TIME TO POWER DOWN:

When you're all done, switch off the Kettle Heat switch. You can leave the light on for display and to keep any remaining popcorn warm.

IMPORTANT NOTES

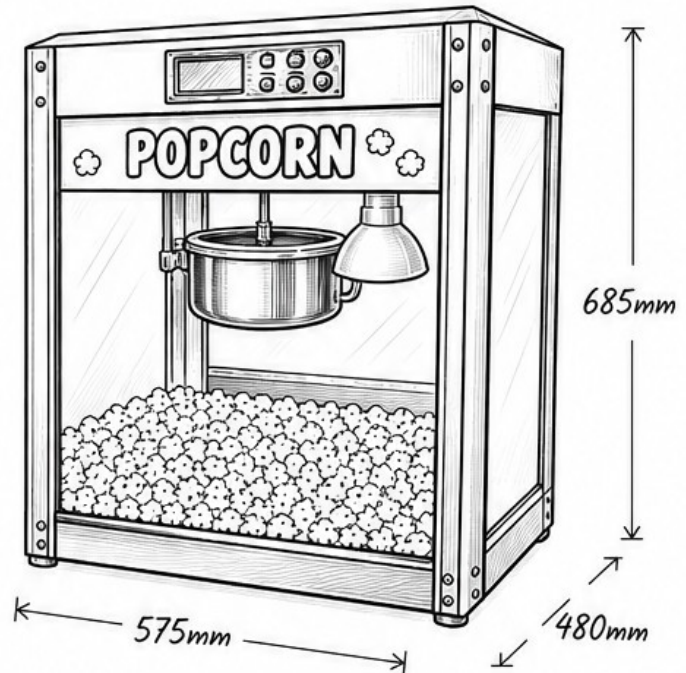

PLEASE DO NOT SPICE THE CORN IN THE MACHINE

PLEASE ENSURE THERE IS NO LEFTOVER CORN IN THE MACHINE BEFORE RETURN

TURBO POP POPCORN MACHINE

DIMENSIONS:

Height: 685mm x Width: 575mm x Depth: 480mm

POWER:

220 Volt / 1.25 KW / 5.68 AMP

HEAVY DUTY INDUSTRIAL MODEL

MEDIUM CAPACITY KETTLE:

200 gram capacity kettle

BRIGHT YELLOW FOR IMPULSE ATTRACTION

STAINLESS STEEL FOOD ZONE

DIRECT DRIVE STIRRER:

No more stripping of expensive gears

INFRA-RED LAMP:

For light and to maintain warmth

SIMPLE OPERATION:
